Controversies: Nan Ya Plastics

- In May 2023, a case study, Hidden Hazards, by Defend Our Health, was published. It investigated Coca-Cola and its plastic bottle chemical supply chain. Nan Ya ranked 10th in the discharge of toxins such as 1,4-dioxane and antimony compounds into the water and 9th in the release of toxins into the air.

- In January 2022, a major fire broke out at a Nan Ya Plastics factory in Wharton, Texas, where PVC pellets were stored. Toxic fumes from the fire were reportedly dispersed by brisk winds even as a shelter-in-place order was enforced to protect residents.

- Between 2019 and 2023, Nan Ya Plastics paid no environmental liability, according to the violation tracker project of Good Jobs First.
