Assessment of Hazardous chemicals reporting in CSRD

The CSRD requires companies to report how they use and manage hazardous chemicals.

This includes identifying hazardous substances and explaining their impacts on health and the environment.

Companies must also describe actions to reduce or replace these chemicals, helping investors and the public assess sustainability and transition risks.

The Chemsec Team has scrutinized the data in order to make it easily visible to all how the companies are doing.

IMPORTANT INFORMATION:

Please note that CSRD reporting is not part of the ChemScore ranking.
